

WMS introduction in the warehouse of Sievert Logistik in Stockstadt

A significant progress in the company's digitalization strategy

customer success story

“Our aim is to be well positioned both technologically and strategically. With Warehouse Star, we are setting a first milestone towards achieving this goal.”

Hakan Efe
Head of Contract Logistics

“We use Warehouse Star to create an up-to-date dashboard with key figures on a daily basis, which helps us to manage and optimize our flow of goods in the warehouse.”

Andreas Schnaubelt
Team leader in the Stockstadt warehouse

Sievert Logistik has been transporting goods to their destination and to customers for more than 100 years. We are constantly developing: we have long been a flexible and dynamic logistics company, which develops and implements intelligent logistics solutions for many industries and a wide range of goods.

Challenge

- Until recently, processes such as order entry, master data maintenance, incoming goods posting, order picking and inventory management were carried out manually and without digital support.
- The introduction of a warehouse management system was intended to relieve employees, increase productivity, minimize error rates and increase the efficiency of warehouse logistics.

Solution

- The Bitergo WMS (Warehouse Star) went live in June 2024 following a successful test phase.

Benefits

- By integrating customer orders via an interface and a user-friendly user interface, Sievert's employees benefit from a significant reduction in workload.
- Thanks to the clear visual language of the Android interface, the application on mobile handhelds is intuitive and easy for employees to use.
- The creation of WA labels and registration with CEP service providers has been seamlessly integrated into the outgoing goods process and there is a direct interface to the courier service providers. As a result, Sievert's customers also benefit from a significant reduction in workload.
- Both Sievert's customers and employees benefit from increased data transparency.

Main services in use
